Research Interests

My research focuses on the interdisciplinary field of computer science and biology, including intelligent healthcare and bioinformatics. 1) AI for healthcare (AI4H), which involves developing advanced AI algorithms, especially deep learning (DL) and large language models (LLMs), for tasks such as disease detection and risk assessment in the healthcare sector; 2) creating new methods in bioinformatics, such as gene regulatory networks, functional and structural prediction, and systems biology; 3) addressing privacy and security issues related to DL in the medical field. In the long run, I am committed to achieving privacy-preserving artificial general intelligence (PAGI) for healthcare and bioinformatics.
